isolated from Streptomyces peacethis strain 2000. The enzyme converts daunorubicin to doxorubicin, an anthracycline used widely as an antitumour agent. A vector contg. the drxA gene (AAT33617) could be used to transform a suitable host cell which produces daunorubicin, in order to enhance bioconversion of daunorubicin to doxorubicin. Bioconversion can be carried out either by using directly the free or immobilised transformed cells or by isolating the enzyme, which can be used in the free form or immobilised to resins, glass, cellulose or similar substances by ionic or covalent bonds, or grafted to fibres permeable to the substrate or insolubilised by cross-linkage.
                                                                                                                                                                                                                                                The present sequence is that of the daunorubicin 14-hydroxylase,
                                                                                                                                                                                                                                                                                                                                                 New DNA encoding daunorubicin 14-hydroxylase - udaunorubicin to the antitumour agent doxorubicin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              dxrA; doxorubicin; bioconversion; anthracycline; antitumour therapy;

```

V

This protein comprises an N-terminal the daunomycin C-14 hydroxylase (see

modified enzyme derived fr AAW36128) of Streptomyces

from es sp.

It is encoded by a gene construct (see AAV01452) in plasmid pANT199. In this plasmid, the doxA gene (see AAV01447) is translationally fused with a leader sequence encoding 6 histidine residues so that the fusion protein can be affinity purified on a nickel-agarose gel. Daunomycin C-14 hydroxylase is a P450-like enzyme capable of converting daunomycin to the anticancer agent doxorubicin. Host cells, especially Streptomyces host cells, transformed with pANT199 can be used in methods for the production of doxorubicin from daunomycin or for the hydroxylation and oxidation of other anthracyclines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This protein comprises the daunomycin C-14 hydroxylase (DC14H) of Streptomyces sp. strain C5. DC14H is a P450-like enzyme useful for the production of doxorubicin from daunomycin, and for the production and oxidation of other anthracyclines. Its amino caid sequence was deduced from the doxA gene (see AAV01447) identified in the daunomycin biosynthesis gene cluster from C5 (see CC AAV01453). Plasmid vectors (see AAV01451-52) have been constructed cfor use in the recombinant production of DC14H in transformed host ccells. Claimed methods for production of DC14H in transformed host ccells. Claimed methods for production of doxorubicin include: the CC contains the doxA gene; incubating a culture of Streptomyces sp. cc strain C5 with daunomycin; and incubating DC14H with daunomycin. Strain C5 with daunomycin and incubating DC14H with daunomycin. CC DC14H can also be used in claimed methods of producing 13-deoxydaunomycin and darmomycin from 13-deoxydaunomycin. The methods preclude the use of halogens as CC required in the current chemical methods.
                                                                                                                                                                                                                                                                                                                                                               Align seg 1/1 to:

This protein is the encoded product of the Streptomyces sp. strain C5 daunomycin biosynthetic gene cluster orfa (see AAV01453). This gene lies upstream of the doxa (see also AAV0147) gene. The doxa gene codes for daunomycin C-14 hydroxylase (see AAW36128), an enzyme capable of converting daunomycin to the anticancer agent doxorubicin. Host cells, especially Streptomyces host cells, transformed with plasmids (see AAV01451-52) containing the doxa gene can be used in methods for the production of doxorubicin from daunomycin or for the

                                                                                                                                                                                                                                                   This sequence represents the dnrU gene product from the microorganism Streptomyces peucetius. The invention relates to a recombinant microorganism which produces doxorubicin (DoR), in which at least 1 daunorubicin (DaR) metabolism gene selected from dnrU and dnrX, has been inactivated. The microorganism is preferably S. peucetius wMH1658, WMH1654 and WMH1662. The function of the DaR gene is inactivated by insertion of a gene (preferably meomycin/kanamycin resistance gene aphII) into the daunorubicin metabolism gene. The blocking of the function of
                                                                                                                                                                                                                                                                                                                                                                                                      Production of doxorubicin and daunorubicin - using a recombinant daunorubicin producing microorganism in which at least one dnrU dnrX metabolism gene has been inactivated

This gene lies upstream of orfA and doxA (see also AAV01447). The doxA gene codes for daunomycin C-14 hydroxylase (see AAW36128), an enzyme capable of converting daunomycin to the anticancer agent doxorubicin. Host cells, especially Streptomyces host cells, transformed with plasmids (see AAV01451-52) containing the doxA gene can be used in methods for the production of doxorubicin from daunomycin or for the hydroxylation and oxidation of other anthracyclines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note=
Misc-difference 80
        This sequence represents a partial dnrV gene product from the microorganism Streptomyces peucetlus. The invention relates to a recombinant microorganism which produces doxorubicin (DRR), in which recombinant microorganism which produces doxorubicin (DRR), in which at least 1 daunorubicin (DRR) metabolism gene selected from dnrU and dnrX, has been inactivated. The microorganism is preferably S. peucetius wwH1658, wwH1654 and wH1662. The function of the DRR gene is inactivated by insertion of a gene (preferably neomycin/kanamycin resistance gene aphII) into the daunorubicin metabolism gene. The blocking of the function of at least one gene of DRR metabolism can increase DRR and DOR production levels and cause the disappearance of baumycin-like products resulting in DAR and DOR secretion directly into the culture medium.
                                                                                                                                                                                                                                                                                                                                                                                                   production of doxorubicin and daunorubicin – using a recombinant daunorubicin producing microorganism in which at least one dnrU dnrX metabolism gene has been inactivated

Individuals may have between 21 and 11 partial repeats. The repeat shown is defined by SmaI nuclease sites.
C; Comment: Serine and threonine residues in the tandem repeat domain are extensively C; Comment: For an alternative splice form without a tandem repeat domain, see PIR:S40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Experimental source: gastric carcinoma cell R;Zrihan-Licht, S.; Baruch, A.; Elroy-Stein, O.; Keydar, I.; Wreschner, D.H. Pastan I., Decrombrugghe B., Fietzek P.P., Olsen B.R.;
"Nucleotide sequence of a collagen cDNA-fragment coding for the
carboxyl end of pro alpha 1(I)-chains.";
FEBS Lett. 111:61-65(1980).
-i- FUNCTION: TYPE I COLLAGEN IS A MEMBER OF GROUP I COLLAGEN
(FIBRILLAR FORMING COLLAGEN).
-i- SUBUNIT: TRIMERS OF ONE ALPHA 2(I) AND TWO ALPHA 1(I) CHAINS.
1-I- TISSUE SPECIFICITY: FORMS THE FIBRILS OF TENDON, LIGAMENTS AN
BONES. IN BONES THE FIBRILS ARE MINERALIZED WITH CATCUM.
HYDROXYAPATITE
                                                                                                                                  This SWISS-PROT entry is copyright.
